Welcome Message

"On behalf of the Egyptian Society of Laparoscopic Surgery, let me welcome you to our annual gathering in Cairo.
As usual, the congress combines the 3 scientific bodies: ESLS, MMESA, and ESMBS. This enriches the scientific core of the program towards our main objective, the patients' health and life style. This comes through the exchange of experience between different schools and exposure to the new technological application in the different laparoscopic techniques.
We look forward to your valuable contribution in the congress to add to its success. Also, to enjoy the warm weather of Egypt during that winter time of the year, and the unforgotten tour to the historical Egyptian milestones."

President
Prof. Faheem Basiouny

JUST THE **RIGHT AMOUNT OF PRESSURE**

Tri-Staple™ technology generates less stress on tissue during compression and clamping[1†]

Stress on tissue may cause tearing and bruising. The uniquely designed stepped cartridge head of Tri-Staple™ technology grips firmly while dispersing pressure across tissue to achieve less stress.[1†]

NOTE

Bleeding is a Burden

SURGICEL™
Family of Absorbable Haemostats

*"Surgery has, essentially, four big killers wherever it is done in the world: infection, **bleeding**, unsafe anaesthesia, and what can only be called the unexpected."*

Atul Gawande, MD
Assoc. Professor of Surgery, Harvard Medical School, Assoc. Professor of Health and Policy and Management, Harvard School of Public Health

Continuous oozing will not stop with compression/ simple packing. The solution for this bleeding is more time-consuming than it is difficult[1]

32% – 68% of open surgical procedures experience **disruptive bleeding events**[2]

Demonstrated **bactericidal activity in vitro against most common pathogens** associated with HAIs*[3,4]

*Hospital acquired infections

Please always refer to the Instructions for Use / Package Insert that come with the device for the most current and complete instructions.
